# ALFRED DANIEL

Web Security Specialist | Penetration Tester | Secure Code Advocate

Location: Lagos, Nigeria

Email: alfreddaniel279@gmail.com

GitHub: github.com/Vulnex279

Portfolio: vulnex279.github.io

## PROFESSIONAL SUMMARY

Results-oriented Cyber Security Analyst specializing in Web Application Security and Network Defense. Proven ability to bridge the gap between offensive security (Red Teaming) and secure software development (Blue Teaming). Passionate about building resilient digital infrastructures and identifying critical vulnerabilities using industry-standard methodologies (OWASP Top 10).

## TECHNICAL SKILLS

Vulnerability Assessment: Penetration Testing, Phishing Analysis, OWASP Top 10, SQL Injection & XSS Mitigation.

Security Tools: Burp Suite, Wireshark, Nmap, Metasploit, Linux (Kali/Ubuntu).

Programming & Scripting: Python (Security Automation), JavaScript (DOM Security), HTML5/CSS3.

Web Technologies: Secure Headers, HTTPS/SSL Configuration, REST API Security.

## KEY PROJECTS

### Vulnex Link-Guard | Lead Developer & Security Researcher

Developed an automated phishing defense system using Python and Threat Intelligence APIs.

Engineered a real-time scanning engine... detecting malicious vectors with 95% accuracy and reducing false positives."

Mitigated potential social engineering attacks by creating a proactive verification tool for web users.

### Vulnex Ultimate Messenger | Secure Web Architect

Built a secure web communication protocol focusing on data privacy and integrity.

Implemented end-to-end encryption principles to prevent Man-in-the-Middle (MitM) attacks and data interception.

Designed a robust user authentication system to protect against brute-force login attempts.

### Project Vision | UI/UX Security Designer

Conceptualized a Next-Gen Secure Interface focusing on biometric authentication flows.

Created a dynamic, holographic-style dashboard that prioritizes secure user access controls without sacrificing usability.

## EDUCATION

B.Sc. Cyber Security Science

Current Status: Expected Graduation: 2029

Focus: Network Security, Cryptography, and Ethical Hacking.
